TRANSANAL SURGERY COURSE

Nuno Vilela

Video-assisted transanal surgery is an important and innovative tool in the mini-invasive surgery of rectal lesions. The potential of this approach encompasses the local resection of rectal tumors, the resection of residual lesions after neoadjuvant therapy in rectal neoplasms, the excision of the mesorectum with a transanal approach and the approach of retrorectal lesions.

SPCMIN, in its 15th national congress, organizes a WS on video-assisted transanal procedures with the aim of training participants on the most frequent procedures, technique, complications and results, with a panel of experts. The course also includes the performance of procedures in synthetic models.

We hope that this course will appeal to surgeons with an interest in mini-invasive surgery of the rectum.
